Overview

ABSTRACT

Kakuma Refugee Camp is one of the longest-standing humanitarian settlements in sub-Saharan Africa and one of the largest refugee camps in the world. In response to recent reductions in funding for the Kenyan refugee operation, increased global competition for funds, and a common belief that not all refugees in such protracted situations have the same humanitarian assistance needs, UNHCR and WFP decided to undertake a study among refugees in Kakuma Camp. The main aims were to fill knowledge gaps regarding refugee livelihoods and the level and differences of vulnerability in refugee households, as well as to explore the feasibility of delivering more differentiated assistance and to identify the mechanisms that would need to be put in place to do so. Specifically, the study was meant to determine whether a permanent targeting mechanism could be put in place or whether other ways of prioritising assistance exist when resources are tight. The survey covered 2,000 households and was implemented in November/December 2015.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Household and individual

Scope

NOTES

The scope of the quantitative data of this socio-economic assessment includes: - Identification of the household - Characteristics of household members (demographics, disability, education/literacy, trade/skills) - Dwelling characteristics - Access to services - Asset ownership - Sources of income - Economic activity of household members - Assistance - Consumption expenditure - Coping strategies

TOPICS

Topic	Vocabulary	URI
Refugees		
Asylum seekers		
Forced displacement

Sampling

Sampling Procedure

The survey's objective was to deliver representative data of all households living in Kakuma refugee camp, with robust disaggregation to the sub-camp level. (Kakuma has four such sub-camps) The total population in the camp at the time of the survey was estimated at around 26,000 households. For this survey a stratified, single-stage (i.e. non-clustered) sample design was applied. The four sub-camps of Kakuma were considered strata and the 126 administrative blocks were considered sub-strata. All strata and sub-strata were retained for the sample. Within each of these sub-strata, a sample of households was drawn systematically via a random walk sampling process. The total sample size was 2,000 households (500 households in each of the four sub-camps).

Deviations from Sample Design

None.

Response Rate

Information unavailable.

Weighting

No weights were applied during the initial data analysis. However, given that selection probabilities differed across sampling strata, the public-release version of the data contains sampling weights calculated ex-post, which data users may wish to apply during further analysis.

Questionnaires

Overview

All questionnaires are provided in section "external ressources".

Data Collection

Data Collection Dates

Start	End	Cycle
2015-11-08	2015-12-04	N/A

Data Collection Mode

Computer Assisted Personal Interview [capi]

Data Collection Notes

Data was collected through computer-assisted face-to-face interviewing (on tablets).

Questionnaires

All questionnaires are provided in section "external ressources".

Data Processing

Data Editing

The dataset presented here has undergone light checking, cleaning and restructuring (data may still contain errors) as well as anonymization (includes removal of direct identifiers and sensitive variables, and grouping values of select variables).

Data Appraisal

No content available
